pH value	5 - 6
Shelf life in original sealed container	24 months

Areas of application

Used for treating skin which is exposed to occupational demands.

Application

Carefully massage Hand Cream into the skin before starting work and after washing your hands.

Comment

OTHER SKIN PROTECTION NOTES

One in three people today suffers from allergies. Skin complaints are the most common form of occupational disease and can lead to an inability to work. The high concentration of harmful substances at the workplace requires special protective measures to be taken. The fat and moisture content of the skin are particularly important during the winter months. At this time of year, the humidity is very low since the cold air is unable to carry as much moisture as warm air. During this time, humans do not produce so much cutaneous fat. Hands easily become too dry and cracked which can be seen as a layer of white on the skin. Where they can easily become unprotected, they must now be given special care.

For information on proper care, see our skin protection plan (Part no. 6243).
