

Engine Leak Detector, Intake Area

Description

Engine Leak Finder Intake System is a special formula which has been developed for locating leaks in the intake system of gasoline engines, rapidly and straightforwardly. Leaks in the intake area can be established and located by a drop in the engine speed and via a change the HC and CO concentrations in the exhaust emission.

Properties

- good response behavior
- rapid localization
- simple to use
- enables work to be performed quickly
- economical
- high self-ignition temperature
- tested for the use with catalytic converters

Technical data

Form	liquid, aerosol
Base	mixture of solvents
Color / appearance	colourless
Propellant	CO ₂
Odor	characteristic

Areas of application

Used for the intake system of gasoline engines (carburetor and fuel-injection engines).

Application

Systematically spray the components of the intake system with Engine Leak Finder with the engine idling only. The product will be sucked in where the leaks are and burnt together with the air-fuel mixture. When the engine speed has dropped, the leak has been located. With the exhaust emission meter connected on vehicles with or without catalytic converters, the pollutants HC and CO increase sharply for a short time due to the drop in engine speed.

Available pack sizes

200 ml Can aerosol 3351
D
