pH value	5 - 6
Shelf life in original sealed container	24 months

Areas of application
For intensive hand care, especially for strong demands in the workshop or during other work. Also suitable for touch-up care in the household or one's hobbies.

Comment
OTHER SKIN PROTECTION NOTES
One in three people today suffers from allergies. Skin complaints are the most common form of occupational disease and can lead to an inability to work. The high concentration of harmful substances at the workplace requires special protective measures to be taken. The fat and moisture content of the skin are particularly important during the winter months. At this time of year, the humidity is very low since the cold air is unable to carry as much moisture as warm air. During this time, humans do not produce as much cutaneous fat. Hands easily become too dry and cracked which can be seen as a layer of white on the skin. Where they can easily become unprotected, they must be given special care.

For information on proper care, see our skin protection plan (part no. 6243).

Application
When exposed to strong occupational demands, carefully massage into clean, dry hands before and after work as well as during breaks. Can also be used for daily care as needed.

Available pack sizes

100 ml Tube plastic	3358 DE-EN-ES-IT-PT
