

Grinding and Polishing Paste

Description

Milky, creamy polish for achieving a smooth and shiny surface with cured repair and finish resins for repairing laminated glass.

Properties

- simple to use
- very high standard of quality

Technical data

Color / appearance	white
Processing temperature	0 - 40 °C
Flash point	> 65 °C
Form	liquid
Shelf life in original sealed container	24 Monate
Recommended storage temperature	5 - 15 °C

Areas of application

For the professional repair of damaged laminate glass car windows.

Comment

Do not polish the repaired site longer than necessary. The polish is abrasive. Excessive polishing could possibly lead to a high level of material removal so that a depression could be formed in the cured material.

Application

Apply a small amount of grinding and polishing paste to the felt polishing disk that is included in the case for laminated glass repair. Polish the repaired site with the mini drill for around 10 to 15 seconds until the desired result has been achieved. Repeat the process if necessary.

As an alternative, apply a small amount of grinding and polishing paste to a clean paper towel and polish the repaired site by hand for approx. 30 to 60 seconds.
